EXPERIENCES

Collaboraite	Liverpool, UK
Placement AI	May 2026 - Aug 2026
Built a Dual-View Speaker Recognition and Quality-adaptive threshold models to decide if the same person speaks in two audios with varying quality	
KiotViet	Hanoi, Vietnam
Data Analyst	Nov 2024 - Jul 2025
- Analyzed event tracking data to enhance the active engagement rate of retailers <i>Achievements</i>: Identified cheating; segmented customers based on their website activity	
Advesa Digital Solutions	Hanoi, Vietnam
Data Analyst	Oct 2022 - May 2024
- Reported monthly insights to stakeholders; collaborated with business teams to gather and clarify requirements Led training sessions for end users; worked with teams to identify and resolve data errors <i>Achievements</i>: Reduced the project timeline from 6 months to 3 months, delivering insights through data analyses (e.g., a resale generated CA\$12k)	

EDUCATION

Lancaster University	Lancaster, UK
Master of Science in Artificial Intelligence	Oct 2025 - Sep 2026
- Notable modules: Generative AI, Intelligent Agents and Autonomous Systems, Large Scale Platforms for AI - Average aggregation marks: 85.6/100 (High Distinction)	
Foreign Trade University	Hanoi, Vietnam
Bachelor's degree in International Economics (<i>High-quality program taught in English</i>)	Aug 2020 - Jul 2024
- Cumulative GPA: 3.56/4.0 (Academic scholarship for excellent students in 2022) - Related Modules: Advanced Mathematics, Statistics and Probability, Data Management System, Programming for Data Analysis and Scientific Computing	

PROJECTS

Speaker Recognition (<i>In progress</i>)
Combined supervised and self-supervised speaker embeddings with a novel quality-adaptive decision boundary for deployment in security-critical environments.
<u>Werewolf - How to be a Better Villager</u> (<i>In progress to publish to IEEE Transactions on Games</i>)
- Built a multi-agent framework where SLM villagers used post-game coaching to improve deception detection and coordination against LLM adversaries Results: Larger models (31B) can synthesize and execute multi-agent coaching feedback to reduce belief error, whereas smaller models (12B) struggle to adapt.
<u>Difficulty-Conditioned Generation of Chess Puzzles</u>
- Implemented a decoder-only transformer from scratch with difficulty-conditioned generation by prepending ELO-class tokens to FEN sequences Results: Prepending difficulty token failed to produce differentiated difficulty distributions. The LLM-as-a-judge aligns with experts on surface-level metrics
<u>Building Amazon Recommendation Systems</u>
- Led a 5-member team; defined the project approach. Implemented ClickHouse; performed content-based, collaborative, dynamic hybrid recommendations Results: Selected ClickHouse to store both raw data and vectors. The models produced relevant recommendations.
<u>Evaluating small language models (SLMs) as a solution to the challenges posed by large language models (LLMs)</u>
- Led a 5-member team; defined the project. Conducted Domain-Adaptive Continued Pre-Training (DAPT) and SFT on SLMs; executed evaluations Results: DAPT alone degraded performance. DAPT + SFT SLMs are comparable to base ones, though LLMs remained superior overall.

SKILLS

- Python** - proficient (*data manipulation, scripting, ML pipelines*)
- Machine Learning** - proficient (*model training, evaluation, feature engineering, predictive/prescriptive analyses*)
- SQL** - proficient (*complex joins, CTEs, window functions, performance-aware queries*)
- Agentic AI** - proficient (LangChain / LangGraph / LangSmith)
- Language Modelling** (*fine-tuning, prompt engineering, evaluation*)
- Computer Vision** (*image classification, transfer learning*)
- Data Analysis** - advanced (*EDA, insight generation, stakeholder-focused analysis, storytelling*)
- Other Technologies**: Git & Github, Docker, Airflow, Glue, Redshift, S3, Azure, Confluence, Jira, ClickUp
- IELTS**: 8.0 (2024)

CERTIFICATES

- LangChain Academy**: All courses related to LangChain, LangGraph, and LangSmith in Python; **DeepLearning.AI**: AI Agents in LangGraph
- Coursera**: Data Science Math Skills, Machine Learning Specialization, Deep Learning Specialization; **Stanford Online**: AI - Principles and Techniques
- "Data Science in Economics and Business" Program** ([Datapoint](#) and [Foreign Trade University](#)): TOP 5 Students with Highest Overall Score 2022
- Khan Academy** (Statistics and Probability, AP®/College Statistics); **HackerRank**: SQL (Advanced) Certificate
